About DigitalGlobe Sample Imagery

For years, people around the world have turned to DigitalGlobe for high-resolution satellite imagery depicting newsworthy world events and locations of interest. DigitalGlobe's imagery shows the Earth in stunning detail and clarity.

DigitalGlobe is making available for free a selection of satellite images that demonstrate the impressive technology of our satellites, as well as the natural beauty of the Earth. These images may be downloaded free of charge.

The imagery above was selected from the DigitalGlobe Image Library. It has been resampled and compressed into JPEG format for on-screen viewing and has been manually color-corrected for maximum visual appeal. This imagery should not be stretched beyond its current size. It has been rescaled in most cases to show an area of interest, and thus does not represent the full resolution of the original image.
